MicroClear® M-100 is a proprietary organic formulation of micronutrients designed to enhance the performance of biological systems. It enhances biological growth, shortens lag time, increases biological activity and provides the critical building blocks necessary to maintaining a healthy floc-forming population. The formulation consists of micronutrients, trace minerals, amino acids and vitamins. There are sixteen trace minerals, including calcium, iron, magnesium, manganese and zinc. The formulation also includes twenty amino acids, such as glycine, and thirteen vitamins, including folic acid.

Product Uses: Regular application of **MicroClear® M-100** can provide numerous benefits to operators of all types of biological waste treatment processes. Research has shown that inadequate micronutrients can lead to poor settling or high effluent suspended solids due to unhealthy floc. The addition of micronutrients also increases the biological degradation rate in many situations which will allow the biomass to more rapidly respond to sudden increases in loads or toxic shocks. Finally, laboratory studies indicate that application of micronutrients can lower final effluent BOD₅ levels by maintaining a healthy population capable of more complete organic reduction in a shorter time.
